

React: Life Cycle Methods

React – Changing Box

The following exercise contains the following subjects:

- ◆ Life Cycle Methods

Instructions

1. We want to create a simple app: a box that changes color every half a second.
2. It is annoying to watch the component changing all the time so we want to stop it after 10 times.
3. Let's add a final touch. Let's change the box to a circle before we remove it. We will change the shape to circle after 5 color changes
